

Recycling Internal Waste with Material Handling Solutions

Environmental awareness, sustainability, ‘green’ or carbon foot printing, no matter what term you use today, everyone and every facility is aware that their processes need improving. Since 1922, Abel Womack has provided material handling equipment to handle internal product reclamation.

Whether you are in the pharmaceutical, beverage, food, automotive, or manufacturing industries, to name just a few, a company must have some way to track and/or reuse what is not consumed within your operations.

Many progressive industries are designing internal reclamation processes for utilization and recycling of goods they either don’t need or are considered waste. Abel Womack has many types of conveyor and conveying equipment to fulfill these demands.

Here are a few examples of how you can reclaim and recycle waste from your own facility by utilizing Abel Womack’s premier supplier resources.

Post Production Item	Current Method	Solution
Empty cartons / boxes	Discarded at random workspaces	Overhead “takeaway” belt conveyor with high-sides and input points for refuse. Carries to ONE central location for recycling.
	Employees hired to “patrol” and pick up discarded boxes	
	Various dumpsters located within facility	
Strapping or banding	Put into drums or dumpsters at work stations	Drums or bins staged on low-level takeaway conveyors. Accumulated to release once full or picked up for recycling.
	Thrown on floor for maintenance to clean up	
	Discarded randomly with regular trash	
Excess fill or dunnage	Swept up or out	Collected and repacked (if desired) with floor to floor conveyor for reuse.
	Hand picked and reused by packing employees	

No matter what the need, application or industry, Abel Womack can help you maintain a sustainable and cost-effective operation by utilizing our many industry leading products.
