

*“Visibility into the  
detail that matters.”*

The iWAREHOUSE LMS offering is a comprehensive, revolutionary solution that provides visibility to standard metrics of productivity and utilization.

But more than that, it provides detail into operational metrics, including budgeting as well.

# LEADING TO THE PATH OF MEASURABLE IMPROVEMENT IN EFFICIENCY AND PROFITABILITY.

The iWAREHOUSE® LMS offering is a comprehensive, revolutionary solution, providing visibility to standard metrics of productivity and utilization. But more than that, it provides detail into operational metrics as well.

As a cloud-based LMS, this solution is easy to implement. Getting the system up and running requires no costly hardware, and valuable IT time is minimal. Non-customized upgrades and updates are included with the standard product. Put it all together and you have a powerful, cost-effective solution that delivers unprecedented visibility and sheds new light on ways to achieve greater efficiencies.

## THE iWAREHOUSE LMS DIFFERENCE:

- » Comprehensive program, not just a system. Consulting services, maintenance and support available after implementation
- » Integrates with the iWAREHOUSE® fleet and warehouse optimization system to capture additional activity data
- » Operationally focused – cost-to-serve, activity-based costing, automated incentives and volume-adjusted budget information
- » Captures data from multiple sources – warehouse management systems (WMS), time clock and iWAREHOUSE
- » Modeling capabilities – validate standard changes before they go into effect

Detailed reports provide a central location for business decision metrics, including cost to serve, incentives and savings. Reports include individual employee data. Automated self-funded incentive programs using multi-variable metrics are included.

## BENEFITS:

- » No high upfront costs, low cost of ownership
- » No hardware - data stored in the cloud
- » Go-live in as little as four weeks, in some cases
- » Non-customized upgrades and updates are included with the standard product, no additional purchases required in most cases
- » The only LMS that has been integrated into iWAREHOUSE, the industry's leading fleet and warehouse optimization system

Management can receive automated reports which provide a complete analysis to reveal trends and promote responsive action, including budgeting.

By integrating this LMS offering with iWAREHOUSE, you'll have improved visibility of the activity associated with each task, including:

- » Consistent maintenance of the standards
- » Utilization of not just the associates, but also of the equipment
- » Visibility to driver idle time
- » Cost information based on the true cost
- » Automated vehicle pre-operational checklists
