

Pharmaceutical Firm, Warwick, RI Automated Storage and Retrieval System

Abel Womack is thoroughly familiar with the challenges pharmaceutical companies face when storing, handling and distributing their products. We review each client's needs and create solutions for a number of problems critical to their industry.

Due to industry regulations, pharmaceutical companies are required to retain a representative sample of the products they manufacture. Our client's existing storage area did not meet their needs. When the company made the move to their new facility in Warwick, RI, they came to Abel Womack for an organized and secure solution for storing their samples.

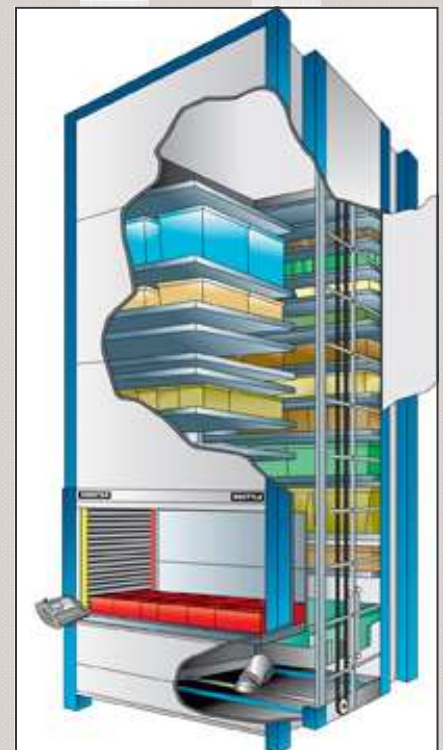

Abel Womack used a Remstar automated storage and retrieval system to solve the challenge. The new 10 foot tall unit made use of the vertical space in the building while keeping the horizontal footprint as small as possible. The samples are now organized in a clean, orderly, dry and dark environment. It was especially important that the new storage system be dark as exposure to sunlight could damage the samples.

With the Remstar unit, the client now has exactly the kind of storage space the company required for its existing products as well as extra space to meet future needs.

Project Key Features:

- Remstar XP Shuttle provided orderly and secure storage for a long term storage solution.
- Client was able to meet industry requirements for storing samples without light entering to damage samples.
- Remstar unit meets current company needs with extra space for future storage requirements.

Completion Date: 2008

Remstar automated storage and retrieval units provide organized and secure storage while minimizing area used as compared to file cabinets or racks.
